Organic farming is a form of agriculture that relies on crop rotation, green manure, compost, biological pest control, and mechanical cultivation to maintain soil productivity and control pests, excluding or strictly limiting the use of synthetic fertilizers and synthetic pesticides, plant growth regulators, livestock feed additives, and genetically modified organisms.

Quality is our main objective. We are the only skincare company that tests every batch we make in actual treatments on clients before it is allowed to be shipped to you. That means we know every product is perfect and works just like it should. Nobody else takes the time or has the facility to do that.

Wild-crafting is the practice of harvesting plants from their natural or "wild" habitat, for food, medicinal, or other purposes. It applies to uncultivated plants wherever they may be found, and is not necessarily limited to wilderness areas. Ethical considerations are often involved, such as protecting endangered species.

Exceptional Fruit+Glycolic Peel – A concentrated blend of five botanical extracts: bilberry, sugar cane, sugar maple, orange, and lemon. These extracts contain several naturally occurring alpha hydroxy acids. Alpha hydroxy acids have been shown to promote smoother, younger looking skin by increasing the rate of cell renewal. Alpha hydroxy acids (AHAs) have been used in skin care for many years. At first, they were used mainly by dermatologists as skin peeling and moisturizing agents; cosmetic companies have since “discovered” AHAs and their almost miraculous activity and formulate with them regularly in their skin care lines. Exceptional Fruit+Glycolic Peel is produced by taking several species of plants and running them through an exhaustive extraction process, which naturally concentrates the active principles. It is glycolic acid that is responsible for the immediate skin softening effect felt by consumers when they first use an AHA product. Citric acid, when topically applied, stimulates collagen synthesis. Both tartaric and malic acid boost skin elasticity. To combine all of these AHAs results in a truly multifunctional peel.

Lactic Renewal Peel – L+ Lactic Acid is the natural form of this multifunctional cosmetic ingredient, and is metabolized by the body more readily than the synthetically produced Lactic Acid. When compared to Glycolic or Citric Acids, Lactic shows greatly reduced irritancy while offering pronounced efficacy in exfoliating and skin rejuvenation. Great on ethnic skin.
